

A. Define Your Product

Answer the following questions in your document:

1. What problem does your product website solve or address

The product would solve the problem of how much of a hassle it may be to find watches that suit your style without having to look at pages and pages of different watches on websites.

2. What is your product idea? How does your website support this idea and help solve the problem?

MatchWatch. The website will promote MatchWatch and give the users an overview of what MatchWatch is.

3. What type of website are you building? (i.e., e-commerce, brochure, portfolio, media, nonprofit, etc.)

Business

4. What is your mission statement? Summarize what your product does, who it's for, and why it matters.

MatchWatch, the app that finds matches your next watch with your next style.

B. Profile Of Target Audience

Answer the following questions in your document:

1. Who is the primary audience that your product is trying to reach? Include the following details about your target audience:

My primary audience would be within the age range of 20-60 years old, have a gender distribution of about 70% men and about 30% women, have visitors that typically live in the U.S. and live in mostly urban areas.

The average income of visitors would be around \$30,000-\$80,000 who are either in college or have already finished college. If they have finished college, I would expect the visitor to either be married or be single, as well as be working at some sort of company that would require them to dress professionally (suit, dress pants, blazer, etc.). I would expect the visitors to work a minimum of 20-30 hours a week. My visitors would probably use the internet for the majority of the day at the bare minimum, and would probably access the internet via a personal computer/laptop, a work computer/laptop, or from their mobile device.

2. Create a chart with at least three fictional visitors from your target audience. This chart should include at least their name, sex, age, location, occupation, income and web use. You can create this chart manually or with AI tools like [ChatGPT](#).

Name	Marcus Vance	Tyler Chen	Jordan Hayes
Sex	Male	Male	Female
Age	28	34	26
Location	Chicago, IL (Urban)	New York, NY (Urban)	Boston, MA (Urban)
Occupation	Junior Financial Analyst	Corporate Account Executive	Marketing Coordinator
Income	\$65,000	\$78,000	\$45,000
Web Use	10+ hours/day (Splits time between a dual-monitor work laptop, personal smartphone, and evening desktop browsing).	12+hours/day (Constantly connected via work laptop, smartphone for client comms, and tablet).	9+hours/day (Uses personal laptop for tasks and mobile device throughout the day).
Education & Status	Bachelor's degree; Single	Bachelor's degree; Married	Bachelor's degree; Single

Professional Dress	Suit and tie / Business formal	Tailored suit / Business formal	Blazer and dress pants / Business casual
---------------------------	--------------------------------	---------------------------------	--

3. Create a list of reasons why people would be coming to your site and assign the list of tasks to the fictional visitors you created. You can complete this step manually or with AI tools like [ChatGPT](#).

Visitor Name	Primary Reason for Visiting	Specific Task Assigned on MatchWatch
Marcus Vance <i>(Junior Financial Analyst)</i>	Milestone Purchase: Wants to celebrate his recent promotion with a reliable luxury-entry watch that pairs with his custom business-formal suits.	• Complete the "First Major Milestone Watch" style assessment. • Filter result strictly by a \$3,000–\$5,000 budget and steel-band dress chronographs. • Compare three different minimalist luxury faces side-by-side using his dual-monitor work laptop during a lunch break.

Tyler Chen <i>(Corporate Account Executive)</i>	Wardrobe Versatility: Needs a versatile timepiece that transitions cleanly from high-stakes boardroom presentations to evening networking events.	• Use the mobile app to run the "Boardroom-to-Dinner" Style Matcher. • Filter result to shortlisted hybrid smartwatch.
Jordan Hayes <i>(Marketing Coordinator)</i>	Aesthetic Alignment: Looking for a stylish, modern watch that complements her creative-professional blazers without breaking her entry-level budget.	• Take the Style & Budget Quiz on her personal laptop. • Filter recommendations specifically for under \$500 with interchangeable leather and mesh straps.

Part III: Planning & Designing Your Product Website

Before you jump into building your site, it's essential to take a step back and plan with purpose. A beautiful website that doesn't meet its goals is a missed opportunity. Use this section to clarify your website's purpose, structure, and style so that your site is usable, accessible, and goal-driven.

A. Website Requirements

By addressing the questions below, you'll gain valuable insights into how to design a website that meets your goals and expectations.

1. Purpose & Goals

Answer the following questions in your document:

- What is the primary goal of your website (i.e., promote a service, sell a product, educate users, raise awareness, etc.)?

The Primary Goal is to promote a service, that service being the app MatchWatch.

- What is the most important action you want users to take on your site (i.e., sign up, purchase, read articles, submit a form, etc.)?

At most, The most important action would be to submit a form that links you to the app and connects you with the watch you were recommended to the app.

2. Content & Features

Answer the following questions in your document:

- What content and features are essential to help users achieve their goals? List critical pages and features (i.e., About, Contact Form, Product Gallery, FAQs, Reviews, etc.).

Home Page: Gives a general overview of what MatchWatch is and essentially promotes it.

Style and Budget: Allows the user to fill out a sort of short form that after finishing, matches them with a watch and will give them the option to either connect them to the app or restart the quiz.

About: The about page will explain once again what MatchWatch is, but will also give more explanation on its reason for existing and will give the contact information for the creator of MatchWatch.

- What will your homepage highlight? Think about the first impression and what visitors need to see right away.

The Homepage will highlight MatchWatch and what it does. Users will typically see that the site is tailored to promote watches in general, as well as promote the Style and Budget Quiz at the end of the page.

3. Look & Feel

Answer the following questions in your document:

- Do you have examples of websites that inspire your design? List 1–2 examples and what you like about them (i.e., layout, colors, interactivity, etc.).

<https://www.affinity.studio/>: I like the colors and the way the website has its pictures laid out.

<https://trello.com/>: I like the way they incorporated the human hand that actually shows the app.

- How would you describe the overall style of your site (i.e., modern, bold, minimalist, playful, professional, etc.)?

I would like to say that the overall style of the site would (hopefully) be modern and professional, but have something (even if it's small) that makes it stand out (essentially bold).

- Do you have preferences for color, fonts, or imagery? If not, what mood or personality do you want the site to convey?

I would want the site to convey that this website is promoting an actual app that you could benefit from, something that looks professional, but something that also looks bold as well. I was thinking of a dark/deep green color with some lighter green colors for text and maybe incorporate a little light brown for any imagery involving watches.

B. Design & Prototyping

In this final section, you'll bring together your ideas and planning to shape the visual direction of your product website. You'll document your design choices and development strategy through diagrams, sketches, and visuals that guide your build process.

1. SDLC Approach & Timeline

In your answer document, outline how you plan to build your website using the SDLC. Your plan should include:

- The SDLC model you've chosen (Waterfall, Agile, Scrum, etc.).

MatchWatch Website: Agile Development Timeline

Phase 1: Product Backlog & Sprint Planning (Week 1: Oct 1 – Oct 7)

- **Define the Product Backlog:** Create a prioritized list of all features needed for the site (Homepage overview, About page, Style and Budget quiz, App-link submission form).

- **Sprint 1 Goal Setting:** Plan out the first two-week sprint focusing on core branding and the basic page layout.
- **Design & Theme Setup:** Establish the dark/deep green color scheme, lighter green text, and light brown watch imagery accents.

Phase 2: Sprint 1 – Core Static Pages (Week 2–3: Oct 8 – Oct 21)

- **Homepage Development:** Build out the main landing page to instantly highlight MatchWatch, its professional/bold vibe, and promote the upcoming quiz.
- **About Page Development:** Draft the mission behind MatchWatch and add the creator's contact details.
- **Review & Retrospective:** Review the static pages to ensure the modern, professional, and bold aesthetic hits the mark before moving on to interactivity.

Phase 3: Sprint 2 – The Interactive Quiz & Form Logic (Week 4–5: Oct 22 – Nov 4)

- **Quiz Development:** Build the interactive "Style and Budget" short form that processes user selections and generates tailored watch recommendations.
- **App-Link Integration:** Code the final submission form that connects users directly to the MatchWatch app.
- **Review & Retrospective:** Test the quiz flow, reset buttons, and app-linking paths to ensure they work smoothly.

Phase 4: Sprint 3 – Refinement, Testing & Polish (Week 6–7: Nov 5 – Nov 18)

- **Cross-Device Testing:** Test the website layout and quiz responsiveness across mobile, tablet, and desktop.
- **Bug Fixing & User Feedback:** Address any broken links, spacing issues, or friction points in the user journey from the homepage to the app link.
- **Content Polish:** Proofread all copy to ensure a strong, cohesive, and professional presentation.

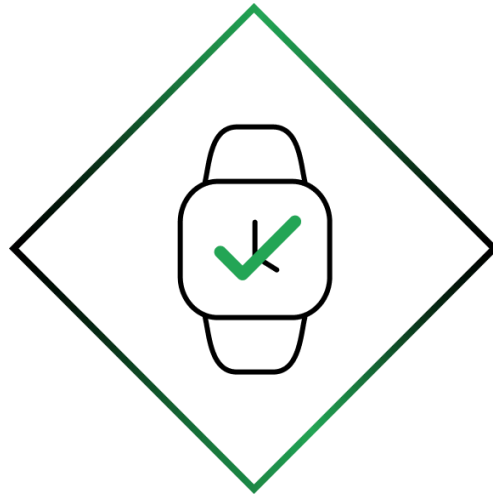

Phase 5: Final Deployment & Release (Week 8: Nov 19 – Dec 1)

- **Final Quality Assurance (QA):** Run a comprehensive final check of all forms, images, and live links.
- **Production Launch:** Deploy the live website to your domain well ahead of the **December 1st** deadline.

2. Original Logo

Design a logo for your product website that visually captures your brand identity. Your logo must include:

MatchWatch

3. Site Map

Create a site map that shows how your site will be structured and how users will navigate between pages. Your site map should:

[Site map](#)

You can create your site map manually on paper, using [draw.io](#) or with AI tools ([Slickplan](#), [Octopus.do](#)).

4. Wireframes

Design wireframes for your homepage and at least two other core pages. Your wireframes should:

[Wire frame](#)

You can create your wireframes manually on paper, using [draw.io](#) or with AI tools ([Uizard](#), [Figma with AI plugins](#)).

5. Accessibility

In your answer document, explain how your product website will be made accessible from the start. Your plan should include:

I will implement the basic features that are usually implemented in most websites (high contrast, text-to-speech, language translations for a couple languages, etc). For those with disabilities, I hope to include a text-to-speech option, full keyboard navigation, large clickable buttons, and high contrast mode.
