

Answer the following questions in your document:

1. Which type of ideas do you think apply to Shyp? Why?

Simplify: Keywords and phrases such as “The easiest way to ship anything” were used, which had me thinking about Shyp making the process of sending packages to different places in the world a lot easier.

Virtualize: Shyp takes a normally face-to-face process (sending packages) and turns it into a mostly electronic process (taking pictures and requesting a pickup virtually)

2. Which type of ideas do you think apply to Curofy? Why?

Me Too: According to the video, Curofy is an app similar to LinkedIn, which means the idea behind the app is similar to LinkedIn, except it's used exclusively for doctors instead of for Job Searching/Job Profiling.

Remix: Social Media-Esque App for Doctors (idea 1) that also acts as a News Media app for the healthcare industry (idea 2) and allows doctors to reference cases (idea 3).

3. Use [Product Hunt](#) to find a relatively new startup and respond to the following about it:

- Describe the idea.

ScreenCursor: A screen recorder with auto zoom effects.

- Describe the type(s) of ideas that apply to it.

Simplify: Takes the process of screen recording, editing, and zooming in on certain things and makes it simple to perform all in one.

Remix: Screen recording (idea 1), Editing (Idea 2), and Zooming in (Idea 3) are all combined into one idea/app.

- Is the idea a painkiller or a vitamin? That is, does the idea address users' needs or emotions? Why?

At most, ScreenCursor is a painkiller. ScreenCursor is more of an app that functions as a solution to the problem of people feeling like screen recording and editing videos is a chore.

- Is the idea easy to monetize?

Since ScreenCursor is a painkiller, I would say that it *is* easy to monetize.

- Is the idea simple and easy to describe?

The app is just a screen recorder with auto-zoom functionality, so yes, it is simple and easy to describe.

- Is the idea personally relevant? Are you or is someone close to you connected to the idea or the related problem?

I would say that I could see the idea being relevant in today's age, seeing as how there are a lot of people that are easily drawn to the idea of things "being made simple".

- Does the idea have a large market?

Editors, Videographers, Social Media Influencers, etc... It does seem to have a large market.

- Does the idea have a legitimate secret sauce?

No, it doesn't. It's just a screen recorder with auto-zoom, nothing too special about it.

A. Brainstorming

Answer the following questions in your document:

1. Brainstorm ideas of problems you want to solve with software like an app or website. Include all the problems you came up with in your document.

Problem: Men/Womens apparel - Not finding the right wristwatch/wristpiece to go with your style.

Problem: AI-Image Generation - Artists being unable to effectively protect their personal IPs from AI-Image Editors (that are in some cases built into the social media platforms they post on)

Problem: Editor Accessibility - Too little Editors in the social media industry.

2. Brainstorm ways to solve the problems. Include all the solutions you came up with in your document.

Solution: An app that finds the right wristwatch for you based what you want to wear and what you're looking for in a watch.

Solution: An AI-Image Generation Corruptor that automatically corrodes/corrupts the final product of photos that were put into an AI-image generator/editor

Solution: A website made by editors that helps teach people how to become semi-professional or professional editors based on the genre of editing they desire or the type of app they want to use to edit.

3. Choose one of your ideas as your product that you will turn into a website for this course. Why did you pick this idea over the other candidates?

Chosen Idea: MatchWatch

The app that finds the right wristwatch that suits your style.

I chose this idea because I felt like I could see more people finding this idea useful compared to the other ideas, whether the idea exists already or not.

4. Is your idea a new one or has it existed before?

It has existed before, as there is an app called “WatchMatch” that functions similarly.

5. What industry would your idea be useful in? Why? (i.e., advertising, apparel, arts, automotive, cosmetics, education, entertainment, food, etc.)

I could see this app being useful in the apparel, arts, and entertainment industry. The apparel industry for more obvious reasons since it’s meant to find a watch that matches your style. However, for the art industry, I could see it as a tool to help artists add more to their characters. The same thing would apply with the entertainment industry.

A. Product Proposal

Answer the following questions in your document:

1. Describe the product you have come up with and the type(s) of ideas that apply to it.

MatchWatch: An app that matches you with the right watch for your next outing.

Types:

- **Simplify:** Simplifying the Watch-Finding Process, making it less of a hassle.
2. How is your product personally relevant to you? Are you or is someone close to you connected to the idea or the related problem?

It’s relevant to me because I am an avid-fan of wristwatches but I oftentimes find it very hard to find one that matches with whatever style I’m going for on a given day.

3. What problem will your product solve?

The product would solve the problem of how much of a hassle it may be to find watches that suit your style without having to look at pages and pages of different watches on websites.

4. What type of website will your product be? (i.e., blog, business, brochure, etc.)

Business

5. Is your product a painkiller or a vitamin? That is, does it address users' needs or emotions? Why?

It is a painkiller, as it solves a given problem and serves a more obvious purpose (the hassle of finding suitable watches).

6. Is your product easy to monetize?

Yes.

7. Is your product simple and easy to describe?

It is an app that finds a watch that suits your needs based on predetermined preferences selected by the user.

8. Who will be the likely users of your product? Does your product have a large market?

Users who wish to find a watch or find some watches that will match with their own sets of clothes. It has a large market to go off of (The watch market in of itself)

9. Does your product have a legitimate secret sauce?

The "Secret sauce" for the app would be a form that the user would fill out, and based on the results of that form, it would either match them with a watch that is as close to their preferences as possible **or** match them with a site that gives them a selection of watches that are as close to their preferences as possible.
